

TARZ

# Protect those who protect us.

Ventus Tactical is dedicated to providing superior respiratory technology to the military and law enforcement sectors. Our mission is to develop advanced protection with zero compromise to performance. In collaboration with operators, veterans, and military experts, we work day in and day out to innovate at the highest level.

# Leading a new standard.

---

The Tactical Respirator II protects your lungs while facilitating effective performance. It's compact, low-profile design is easy to wear and integrates with essential equipment like helmets and headsets. The TR2 is confirmed by operators to be more comfortable and more breathable even in hazardous environments compared to other respirators.

# The result of research.

The TR2 comes from countless hours and many years of active, rigorous testing on the range, researching air pollution and implementing respiratory protection. We collaborated with Tier 1 Operators and technology leaders to exceed crucial requirements. This is our territory.

# Key field applications.

Military and law enforcement spend hours in simulated training environments. During training, operators can inhale hazardous airborne particles, such as aerosolized lead and asbestos. Chronic exposure can lead to serious side effects and illnesses. The TR2 mitigates these airborne threats, without creating any training scars.

---

## Firing Range & Breach Training

### HAZARDS

Aerosolized lead  
Mold  
Fungus  
Concrete dust  
Lead paint dust

### RISKS

Lead poisoning  
Silicosis  
Lung cancer  
Seizures  
Infertility

# Focus on Performance.

We focused on building a superior tactical respirator so you can focus on operating safely. Breathing should fuel you, not cost you short-term and longterm health effects. The TR2's filters are replaceable and 97% effective to 0.3 microns of particulate matter.

# TR2

## **No eyewear interference**

Integrates with common ballistic eyewear.

## **Flex to fit universal seal**

Extensive user testing enabled us to build a mask that will fit all face shapes and sizes .

## **Durable design**

Built to withstand the demands of the most extreme environments.

## **Interchangeable strap platform**

Allows for the TR2 to integrate into whatever equipment configuration you prefer.

## **No training scars**

Gives operators the confidence to perform regardless of the circumstances.

## **High flow exit valve**

Allows for high volume of air movement in the most strenuous circumstances .

## **Accessory tube**

Can easily swap in our proprietary accessories such as the TR2 mic kit.

# Strap Systems.

Built to protect operators regardless of the training demands, we've engineered multiple strap solutions to ensure the TR2 integrates into any kit. Both rail mounts and head straps are optional configurations for your custom setup. Strategically placed flex zones allow for natural head movement, while maintaining pressure for the perfect seal.

## **TR2 STRAP KITS**

Head strap

Helmet rail mount

Hook & loop

\*head strap included with purchase of TR2.

# Comms Support.

The TR2 provides extremely clear communications with integration into the most common systems. Tier 1 operators endorse our platform as a preferred standard with its unparalleled clarity during breaching and training exercises. Military and law enforcement operators can breathe and communicate effectively without compromising tactical ability.

## **COMPATIBLE COMMUNICATION SYSTEMS**

Peltor 2 - pin

OTTO 2 - pin

Ops Core 2 - pin

*\*sold separately.*
